

# Flextur: Your Welding Productivity Partner

Solving Complex Problems with Simple Solutions

---

**Dalton, OH** - Flextur's Modular System is designed to support users at every stage of their automation journey and grow alongside their advancements. The system begins with a versatile Cobot Docking Station or Pedestal Mount, suitable for both new and existing Cobots. The new Flextur Pedestal Mount can be attached to any existing welding table, while users can opt for up to three Cobot Welding or Quick-Change Tables, available in 36"x36" and 72"x36" dimensions, to surround their Flextur docking station.

Flextur's patent-pending Quick-Change Fixture Table and Quick-Change Fixture Plates ensure precise positioning and clamping of parts or fixtures every time. The pneumatic quick-detach welding Fixture Plate can be easily released and placed in a Fixture Plate storage solution that fits your needs. With a simple touch of a button, the next fixture can be securely clamped into position. Users can then select their new program and maintain a seamless workflow. Flextur guarantees (+/- .01") or less than half a wire width, ensuring repeatable, highly accurate and automated workflows.

Flextur is redefining the creation of fixtures, making them affordable and easy to produce. With Flextur, users can quickly create fixtures with sensible ROIs, even for low-volume parts. The fixtures allow for rapid and cost-effective modifications if requirements change. Users will benefit immediately from exacting repeatability, speed, accuracy and quality. Designed for both manual and automated welding, turntables, head and tailstocks and Flextur's own Quick-Change System.

Many Flextur fixtures, including engineering time, are priced under \$3,000, making advanced automation accessible to a broader range of users.

## About Flextur

Flextur is a US manufacturer of welding and work cell products designed to increase productivity while supporting 5S & LEAN initiatives. Flextur products provide standardization, organization and increased efficiency from individual workspaces to factory solutions. Products include Cobot welding solutions, fixtures, welding tables, tool board solutions, material handling solutions, workbenches, pack stations and more. All designed to reduce cost, improve productivity and ensure compliance with safety and quality standards.
